# 1 — Setup & Prerequisites

Complete these steps before starting any test session

## 1.1 Test Environment

| Item      | Value                                                                  |
|-----------|------------------------------------------------------------------------|
| Base URL  | <code>http://127.0.0.1:5000</code>                                     |
| Database  | SQLite — <code>cas.db</code> (local)                                   |
| Config    | <code>FLASK_ENV=development</code>                                     |
| Start app | <code>python flask_app.py</code>                                       |
| Seed DB   | <code>flask seed-minimal</code> (admin, 1 branch, 6 accounts, VAT+WHT) |

## 1.2 Required Seed Data

Both modules require the following master data to be present before testing:

| Entity         | Minimum Needed                                                                 | Where to Create                                |
|----------------|--------------------------------------------------------------------------------|------------------------------------------------|
| Vendor         | At least 1 active vendor (e.g., code <code>V001</code> , name "Test Supplier") | Maintenance → Vendors → +Create                |
| Accounts       | 1 Cash/Bank account (asset), 1 Expense account, 1 AP Payable account           | Ledger → Chart of Accounts → +Create           |
| VAT Categories | At least: Non-VAT (0%), VAT-able 12% ( <code>V12DG</code> )                    | Maintenance → VAT Categories                   |
| WHT Codes      | At least 1 code (e.g., <code>WC010</code> 1% Professional fees)                | Maintenance → Withholding Tax                  |
| Branch         | 1 active branch selected in session                                            | Admin → Branch Management — select after login |

### TIP — SEED-MINIMAL

Running `flask seed-minimal` creates admin user, Main Branch, 6 essential accounts, 4 VAT categories, and 3 WHT codes automatically. Create at least one vendor manually before testing.

## 1.3 Login Credentials

| Role       | Username           | Password              | Typical Use                              |
|------------|--------------------|-----------------------|------------------------------------------|
| Admin      | <code>admin</code> | <code>admin123</code> | Admin-only actions (user mgmt, settings) |
| Accountant | Create via Admin   | Set on creation       | Primary tester — can post, cancel, void  |
| Staff      | Create via Admin   | Set on creation       | Test create/edit/void restrictions       |
| Viewer     | Create via Admin   | Set on creation       | Test read-only access                    |

### IMPORTANT — PASSWORD FIELD

The login password field is `readonly` (anti-autofill). You must **click the field first** before typing. In Playwright: `click('#password')` then `fill('#password', 'yourpassword')`.

## 1.4 General Testing Rules

- **No JavaScript popups** — void/cancel/post actions use custom HTML modals, never `window.confirm()`.
- **CSRF required** — every POST form includes a hidden `csrf_token`. Requests without it return 400.
- **Audit log** — after every create/edit/post/void/cancel, verify an entry exists at `/audit-log`.
- **Branch scoping** — documents belong to the branch in your session. You cannot see another branch's documents.
- **Accounting periods** — posting to a closed period is blocked. Ensure the target date is in an open period.
- **Admin vs Accountant** — use an *Accountant* user for accounting actions (post, cancel). Admin is for admin-only tasks.
- **Minimum 10 characters** — void and cancel reasons require  $\geq 10$  characters (browser-side *and* server-side enforcement).

## 2 — APV: Accounts Payable Voucher

Module path: /accounts-payable · Blueprint: accounts\_payable

### 2.1 Overview

An APV records a purchase bill from a vendor. Each bill has line items with amounts, VAT, and optional withholding tax. Once posted, it becomes a payable in the AP aging report and can be paid via a Cash Disbursement Voucher (CDV).

**Document number format:** `AP-YYYY-MM-NNNN` (e.g., `AP-2026-06-0001`).

### 2.2 Route Map

| Route                                                          | Methods      | Access                                                 |
|----------------------------------------------------------------|--------------|--------------------------------------------------------|
| <code>/accounts-payable</code>                                 | GET          | All logged-in roles                                    |
| <code>/accounts-payable/create</code>                          | GET,<br>POST | Staff, Accountant, Admin                               |
| <code>/accounts-payable/&lt;id&gt;</code>                      | GET          | All logged-in roles                                    |
| <code>/accounts-payable/&lt;id&gt;/edit</code>                 | GET,<br>POST | Staff, Accountant, Admin (draft only)                  |
| <code>/accounts-payable/&lt;id&gt;/post</code>                 | POST         | Accountant, Admin                                      |
| <code>/accounts-payable/&lt;id&gt;/void</code>                 | POST         | Staff, Accountant, Admin (draft only)                  |
| <code>/accounts-payable/&lt;id&gt;/cancel</code>               | POST         | Accountant, Admin (posted only)                        |
| <code>/accounts-payable/&lt;id&gt;/print</code>                | GET          | All logged-in (gated by <code>ap_print_access</code> ) |
| <code>/accounts-payable/export/excel</code>                    | GET          | All logged-in                                          |
| <code>/accounts-payable/export/csv</code>                      | GET          | All logged-in                                          |
| <code>/accounts-payable/attachments/upload</code>              | POST         | Staff, Accountant, Admin (draft only)                  |
| <code>/accounts-payable/attachments/&lt;id&gt;/download</code> | GET          | All logged-in                                          |
| <code>/accounts-payable/attachments/&lt;id&gt;/delete</code>   | POST         | Accountant, Admin (draft only)                         |

## 2.3 Role Matrix

| Action             | Admin | Accountant | Staff | Viewer    |
|--------------------|-------|------------|-------|-----------|
| View list & detail | ✓     | ✓          | ✓     | ✓         |
| Create APV         | ✓     | ✓          | ✓     | X         |
| Edit draft APV     | ✓     | ✓          | ✓     | X         |
| Post APV           | ✓     | ✓          | X     | X         |
| Void draft APV     | ✓     | ✓          | ✓     | X         |
| Cancel posted APV  | ✓     | ✓          | X     | X         |
| Upload attachment  | ✓     | ✓          | ✓     | X         |
| Delete attachment  | ✓     | ✓          | X     | X         |
| Export Excel / CSV | ✓     | ✓          | ✓     | ✓         |
| Print APV          | ✓     | ✓          | ✓     | ✓ (gated) |

## 2.4 Status Lifecycle

| Status                | Meaning                                                           | Allowed Actions              |
|-----------------------|-------------------------------------------------------------------|------------------------------|
| <b>Draft</b>          | Saved but not posted to the books. Journal entry exists as draft. | Edit · Void · Post           |
| <b>Posted</b>         | Posted to AP ledger. Journal entry posted. Appears in AP Aging.   | Cancel (reversal JE created) |
| <b>Partially Paid</b> | CDV has paid part of the balance.                                 | Further payment via CDV      |
| <b>Paid</b>           | Full balance settled via CDV payments.                            | None (terminal)              |
| <b>Voided</b>         | Draft was discarded. Draft JE deleted.                            | None (terminal)              |
| <b>Cancelled</b>      | Posted bill reversed. Reversal JE created and posted.             | None (terminal)              |

## 2.5 VAT & WHT Mechanics (Philippine BIR)

### CRITICAL RULE — VAT IS EXTRACTED, NOT ADDED

Line amounts in APV are **VAT-inclusive**. The system *extracts* VAT from the amount using the formula:  $\text{VAT} = \text{Amount} \times \text{rate} \div (1 + \text{rate})$ . Example: ₱11,200 at 12% → VAT = ₱1,200 → Net = ₱10,000. Do *not* enter the net amount.

| Field               | Behaviour                                                                                       |
|---------------------|-------------------------------------------------------------------------------------------------|
| Vendor Invoice Date | <b>Required</b> when any line has VAT or WHT. Posting is blocked without it.                    |
| VAT Override        | Enables manual entry of a different VAT amount when auto-calc doesn't match the counterparty.   |
| WHT Override        | Same for withholding tax — use when the rate in the system differs from the actual certificate. |
| Particulars (Notes) | <b>Required</b> — form silently resets the vendor picker if left blank.                         |

## 2.6 Test Scenarios

### A1 Create a basic APV (no VAT, no WHT)

#### STEPS

1. Navigate to `/accounts-payable/create`.
2. Select a vendor from the Choices.js picker (search by code or name).
3. Enter APV Date and Due Date.
4. Fill in **Notes/Particulars** (required — e.g., "Office supplies purchase").
5. Add one line item: Description, Amount (VAT-inclusive), VAT = *Non-VAT (0%)*, no WHT.
6. Click **Enter Bill**.

#### EXPECTED

- Redirected to APV detail page with flash "APV AP-YYYY-MM-NNNN entered successfully!"
- Status badge shows **Draft**.
- Journal entry preview visible with correct debit/credit accounts.
- Audit log entry: `action=create`, `module=accounts_payable`.

## A2 Create APV with 12% VAT (VAT-inclusive line)

### STEPS

1. Create an APV; enter **Vendor Invoice Date** (required for VAT).
2. Add a line: Amount = ₱11,200, VAT = *V12DG — Input VAT 12%*.
3. Observe the computed VAT amount before submitting.
4. Submit the form.

### EXPECTED

- VAT amount auto-computed as ₱1,200 (extracted from ₱11,200 at 12%).
- Net (before WHT) = ₱10,000.
- JE preview shows correct accounts: AP Payable (credit), Expense (debit), VAT Input (debit).

### WHAT TO WATCH FOR

- Posting fails if **Vendor Invoice Date** is blank. Fill it before posting.

## A3 Post an APV (Accountant role)

### STEPS

1. Log in as **Accountant** (or Admin).
2. Open a *Draft* APV detail page.
3. Click **Post Bill** — a confirmation modal appears.
4. Confirm the post.

### EXPECTED

- Status changes to **Posted**.
- Journal entry status becomes *posted*.
- Post Bill and Edit buttons disappear; Cancel appears.
- Audit log entry: `action=post`.

### VERIFY ROLES

- **Staff** — Post Bill button should NOT appear on detail page.
- If staff submits POST request directly → redirected with "Only Accountants and Administrators" flash.

#### A4 Void a Draft APV

##### STEPS

1. Open a *Draft* APV.
2. Click **Void** — modal appears.
3. Test 1: Enter fewer than 10 characters → submit → verify still Draft.
4. Test 2: Enter ≥ 10-character reason → submit.

##### EXPECTED (TEST 2)

- Status changes to **Voided**.
- Draft journal entry deleted ( `journal_entry_id = None` ).
- Void reason and voided-by displayed in detail footer.
- No Post/Edit/Void buttons visible.
- Audit log entry: `action=void` .

#### A5 Cancel a Posted APV

##### STEPS

1. Post an APV (see A3).
2. On the detail page, click **Cancel Bill** — modal appears.
3. Enter cancellation reason (≥ 10 chars) and reversal date.
4. Confirm.

##### EXPECTED

- Status changes to **Cancelled**.
- A reversal JE (`is_reversing=True`) is created and posted.
- AP balance is restored in AP aging.
- Audit log entry: `action=cancel` .

##### WHAT TO TEST

- Cancel reason < 10 chars → blocked.
- Empty reversal date → blocked.
- Staff cannot cancel (accountant/admin only).

## A6 Attachments (upload, download, delete)

### STEPS

1. Open a *Draft* APV.
2. Upload a PDF or image attachment via the attachment section.
3. Verify the attachment appears in the list (filename, size).
4. Download the attachment and confirm the file opens correctly.
5. Delete the attachment (as Accountant or Admin).

### ROLE CHECKS

- **Staff** can upload but cannot delete attachments.
- Attachments cannot be added to posted/voided/cancelled APVs.

## A7 Export & Search

### STEPS

1. Navigate to `/accounts-payable`.
2. Use the status filter (Draft / Posted / Voided / Cancelled) and verify table updates.
3. Use the search box (vendor name, AP number) and verify filtering.
4. Click **Export Excel** → file downloads as `accounts_payable_YYYYMMDD.xlsx`.
5. Click **Export CSV** → file downloads as `accounts_payable_YYYYMMDD.csv`.
6. Apply a filter (e.g., status=posted) and export — verify export respects the filter.

### EXPECTED

- Each export contains only the filtered records.
- Column headers present: AP Number, Date, Vendor, Status, Total, etc.

## A8 Security & Validation

### CHECKS TO PERFORM

- **Unauthenticated access** — `GET /accounts-payable` while logged out → redirect to `/login`.
- **Viewer creates APV** — `GET /accounts-payable/create` as viewer → redirect to dashboard with permission flash.
- **XSS in Notes** — enter `<script>alert('x')</script>` in Notes → stored as plain text, not executed.
- **XSS in Void reason** — enter `<img src=x onerror=alert(1)> reason here` → escaped in detail footer.
- **CSRF** — inspect any form: hidden `csrf_token` input must be present. POST without it → 400.
- **Invalid ID** — `GET /accounts-payable/9999` → 404.
- **No JS confirm()** — triggering Post/Void/Cancel shows custom HTML modal, not browser dialog.

## 2.7 APV Quick Checklist

- ☐ APV list loads and shows correct documents for current branch
- ☐ Status filter works (Draft / Posted / Voided / Cancelled)
- ☐ Create form: vendor Choices.js picker works; VAT auto-calculates on line change
- ☐ Notes/Particulars field is filled (required — no visual required marker, but silently fails without it)
- ☐ Vendor Invoice Date filled when using VAT or WHT lines
- ☐ Draft APV shows correct Journal Entry preview (debit/credit match)
- ☐ Post (as accountant) → JE goes to posted; status = Posted; Post/Edit buttons gone
- ☐ Void (valid reason ≥ 10 chars) → Voided; draft JE deleted; no buttons
- ☐ Void (reason < 10 chars) → stays Draft; modal stays open
- ☐ Cancel (posted APV) → Cancelled; reversal JE created and posted
- ☐ Staff cannot Post or Cancel (no button shown; POST blocked server-side)
- ☐ Viewer cannot create, edit, void, or cancel (all blocked with permission flash)
- ☐ Export Excel → valid .xlsx download
- ☐ Export CSV → valid .csv download
- ☐ Print page renders without error (watermark if cancelled/voided)
- ☐ Audit log: create/post/void/cancel entries present with correct actor
- ☐ XSS in text fields: stored as plain text (escaped in Jinja templates)

☐ CSRF token present in every form

## 3 — CDV: Cash Disbursement Voucher

Module path: /cash-disbursements · Blueprint: cash\_disbursements

### 3.1 Overview

A CDV records a cash or check payment. Each CDV can contain two types of lines: **Expense Lines** (direct expenses paid from petty cash or operating funds) and **AP Payment Lines** (payments against posted AP bills that reduce the AP balance). A single CDV can have both types simultaneously.

**Document number format:** `CD-YYYY-MM-NNNN` (e.g., `CD-2026-06-0001`).

### 3.2 Route Map

| Route                                              | Methods    | Access                                                 |
|----------------------------------------------------|------------|--------------------------------------------------------|
| <code>/cash-disbursements</code>                   | GET        | All logged-in roles                                    |
| <code>/cash-disbursements/create</code>            | GET, POST  | Staff, Accountant, Admin                               |
| <code>/cash-disbursements/&lt;id&gt;</code>        | GET        | All logged-in roles                                    |
| <code>/cash-disbursements/&lt;id&gt;/edit</code>   | GET, POST  | Staff, Accountant, Admin (draft only)                  |
| <code>/cash-disbursements/&lt;id&gt;/post</code>   | POST       | Accountant, Admin                                      |
| <code>/cash-disbursements/&lt;id&gt;/void</code>   | POST       | Staff, Accountant, Admin (draft only)                  |
| <code>/cash-disbursements/&lt;id&gt;/cancel</code> | POST       | Accountant, Admin (posted only)                        |
| <code>/cash-disbursements/&lt;id&gt;/print</code>  | GET        | All logged-in (gated by <code>cd_print_access</code> ) |
| <code>/cash-disbursements/export/excel</code>      | GET        | All logged-in                                          |
| <code>/cash-disbursements/export/csv</code>        | GET        | All logged-in                                          |
| <code>/cash-disbursements/open-bills</code>        | GET (JSON) | All logged-in (AJAX for AP picker)                     |

### 3.3 Role Matrix

| Action             | Admin | Accountant | Staff | Viewer |
|--------------------|-------|------------|-------|--------|
| View list & detail | ✓     | ✓          | ✓     | ✓      |
| Create CDV         | ✓     | ✓          | ✓     | ✗      |

|                    |   |   |   |           |
|--------------------|---|---|---|-----------|
| Edit draft CDV     | ✓ | ✓ | ✓ | ✗         |
| Post CDV           | ✓ | ✓ | ✗ | ✗         |
| Void draft CDV     | ✓ | ✓ | ✓ | ✗         |
| Cancel posted CDV  | ✓ | ✓ | ✗ | ✗         |
| Export Excel / CSV | ✓ | ✓ | ✓ | ✓         |
| Print CDV          | ✓ | ✓ | ✓ | ✓ (gated) |

### 3.4 Status Lifecycle

| Status           | Meaning                                                                 | Allowed Actions              |
|------------------|-------------------------------------------------------------------------|------------------------------|
| <b>Draft</b>     | Saved but not posted. Draft JE exists.                                  | Edit · Void · Post           |
| <b>Posted</b>    | Cash disbursed. JE posted. Any AP lines reduce the linked bill balance. | Cancel (reversal JE created) |
| <b>Voided</b>    | Draft discarded. Draft JE deleted. Cannot be un-voided.                 | None (terminal)              |
| <b>Cancelled</b> | Posted payment reversed. Reversal JE posted. AP balances restored.      | None (terminal)              |

### 3.5 Expense Lines vs AP Payment Lines

| Type                               | When to use                                                              | What it does in the JE                        |
|------------------------------------|--------------------------------------------------------------------------|-----------------------------------------------|
| <b>Expense Line (Section B)</b>    | Paying a direct cost (supplies, utilities, rent) not through an AP bill. | Dr Expense / VAT Input Account · Cr Cash/Bank |
| <b>AP Payment Line (Section A)</b> | Paying against a previously posted AP bill. Reduces bill's balance.      | Dr AP Payable Account · Cr Cash/Bank          |

#### MIX AND MATCH

A single CDV can have *both* expense lines and AP payment lines. The total disbursed = sum of both sections. The cash/bank account is credited for the full total.

### AP PAYMENT LINE PREREQUISITES

The AP bill must be in `posted`, `partially_paid`, or `paid` status. Only unpaid balance is available for application. The AJAX endpoint `/cash-disbursements/open-bills?vendor_id=<id>` returns eligible bills.

## 3.6 Test Scenarios

### C1 Create a CDV with expense lines only

#### STEPS

1. Navigate to `/cash-disbursements/create`.
2. Select vendor, CDV date, payment method (Cash), cash/bank account.
3. Fill in Particulars/Notes (required).
4. In **Section B — Direct Expenses**, add at least one line: Description, Amount (VAT-inclusive), VAT category, WHT code (optional), Account.
5. Click **Enter CDV**.

#### EXPECTED

- Redirected to detail page. Status = **Draft**.
- JE preview shows correct Dr/Cr.
- Audit log: `action=create`.

### C2 Create a CDV with AP payment lines

#### PREREQUISITES

- A posted AP bill must exist for the chosen vendor (see scenario A3).

#### STEPS

1. Select the same vendor as the posted AP bill.
2. In **Section A — AP Bills**, click *Select Bill*. Open bills for that vendor load from the AJAX endpoint.
3. Enter the amount to apply ( $\leq$  bill balance).
4. Submit the CDV.

#### EXPECTED

- CDV created as Draft with AP line applied amount.
- AP bill balance is *not yet* reduced (only reduces on Post).

### C3 Post a CDV and verify AP bill balance

#### STEPS

1. Log in as **Accountant**.
2. Open a Draft CDV that has an AP payment line.
3. Click **Post CDV** → modal appears → confirm.

#### EXPECTED

- CDV status = **Posted**.
- JE status = *posted*.
- Linked AP bill: `amount_paid` increases by the applied amount.
- If fully paid → bill status = `paid`. If partial → `partially_paid`.
- Audit log: `action=post`.

#### ROLE VERIFICATION

- **Staff** — "Post CDV" button NOT visible. Direct POST → blocked.

### C4 Void a Draft CDV

#### STEPS

1. Open a *Draft* CDV.
2. Click **Void**.
3. Test short reason (e.g., "Short") → submit → verify still Draft.
4. Enter valid reason (≥ 10 chars) → confirm void.

#### EXPECTED

- Status = **Voided**. Draft JE deleted ( `journal_entry_id = None` ).
- Void reason + voided-by shown in footer.
- Only "← Back" button visible (no Post/Edit/Void).
- Audit log: `action=void`.

#### ALSO VERIFY

- Cannot void a *Posted* CDV — no Void button on posted CDV page.

## C5 Cancel a Posted CDV and verify AP reversal

### STEPS

1. Log in as **Accountant**. Open a *Posted* CDV.
2. Click **Cancel CDV** → modal appears.
3. Enter reason (≥ 10 chars) and reversal date.
4. Confirm cancellation.

### EXPECTED

- Status = **Cancelled**. Flash: "CDV cancelled. Reversal JE created."
- Reversal JE ( `is_reversing=True` ) created with status = posted.
- Any linked AP bills: `amount_paid` reduced back, `balance` restored, status reverts to `posted`.
- Audit log: `action=cancel`.

### ALSO TEST

- Cancel reason < 10 chars → blocked.
- Empty reversal date → blocked.
- Cannot cancel a *Draft* CDV (no Cancel button on Draft).
- Staff cannot cancel (accountant/admin only).

## C6 Export & Search

### STEPS

1. Navigate to `/cash-disbursements`.
2. Filter by status (Draft / Posted / Voided / Cancelled) — verify table updates.
3. Export Excel → downloads `cash_disbursements_YYYYMMDD.xlsx`.
4. Export CSV → downloads `cash_disbursements_YYYYMMDD.csv`.
5. Apply status=posted filter → export → verify CSV contains only Posted records.

## C7 Print Access Settings

SETTING: `CD_PRINT_ACCESS = POSTED_ONLY` (DEFAULT)

- **Draft** CDV detail → no Print link visible.
- **Posted** CDV detail → Print link visible; print page renders with CDV content.

SETTING: `CD_PRINT_ACCESS = DRAFT_AND_POSTED`

- Both Draft and Posted CDVs show Print link.

### HOW TO CHANGE THE SETTING

Admin → Company Settings → CDV Print Access.

## C8 Security & Validation

### CHECKS TO PERFORM

- **Unauthenticated** — `GET /cash-disbursements` while logged out → redirect to `/login`.
- **Viewer creates CDV** — redirect to dashboard with permission message.
- **Negative amount** in expense line — currently accepted by server (Bug B01). Note actual stored value.
- **Non-numeric amount** ( `abc` ) — form rejects; redirected back to create.
- **XSS in Notes** — `<script>alert(1)</script>` stored as plain text; not executed.
- **XSS in Void reason** — `<img src=x onerror=alert(1)> long reason` — escaped in footer.
- **CSRF token** present in post/void/cancel forms.
- **Invalid CDV ID** — `GET /cash-disbursements/9999` → 404.
- **No JS confirm()** — all actions use custom HTML modals.

## 3.7 CDV Quick Checklist

- ☐ CDV list loads; only current branch's CDVs visible
- ☐ Status filter and date filters work correctly
- ☐ Create (expense only): vendor picker, cash account picker, expense line table all functional
- ☐ Create (AP payment): AJAX loads open bills for selected vendor; `amount_applied ≤ bill balance`
- ☐ Draft CDV shows JE preview with correct Dr/Cr
- ☐ Post (as accountant) → CDV posted; JE posted; AP bill balance updated
- ☐ Post (as staff) → blocked; button not visible; server rejects if submitted directly
- ☐ Void (valid reason  $\geq 10$  chars) → Voided; draft JE deleted
- ☐ Void (short reason) → stays Draft; modal browser-validates minimum length

- ☐ Cannot void a Posted CDV (no Void button)
- ☐ Cancel (posted CDV) → Cancelled; reversal JE created; AP bills restored
- ☐ Cancel (short reason) → blocked; stays Posted
- ☐ Cannot cancel a Draft CDV (no Cancel button)
- ☐ Export Excel / CSV → correct content, filename includes date
- ☐ Export respects active status filter
- ☐ Print link: shown only when status matches `cd_print_access` setting
- ☐ Print page renders cleanly; cancelled CDVs show "CANCELLED" watermark
- ☐ Audit log: create/update/post/void/cancel entries with correct actor
- ☐ XSS payloads in text fields rendered as escaped plain text
- ☐ CSRF token present in every action form

## 4 — Known Bugs & Notes (as of 2026-06-16)

### 4.1 Open Bugs

| #   | Module | Severity | Description                                                                                                                                                                                                                                                                                                        | Workaround                                                                                                |
|-----|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| B01 | CDV    | Medium   | <b>No server-side validation for negative expense amounts.</b><br>Submitting <code>amount: -1000</code> in a CDV expense line creates a CDV with <code>total_amount = -1000.00</code> . The system accepts it without error.                                                                                       | Avoid entering negative amounts manually. Add server-side check at <code>views.py</code> CDV create/edit. |
| B02 | CDV    | Low      | <b>Detail page — expense and JE tables clip on mobile (375px).</b><br>The table wrappers on the CDV detail page use <code>overflow: visible</code> , causing the right columns to be cut off instead of scrolling horizontally. The CDV <i>list</i> page handles this correctly ( <code>overflow-x: auto</code> ). | Add <code>overflow-x: auto</code> to table card wrappers in the CDV detail template.                      |
| B03 | CDV    | Low      | <b>Void/Cancel modals use hardcoded hex colours in inline styles.</b><br>H3, P, and button elements in the void/cancel modal HTML use raw hex values ( <code>#1e293b</code> , <code>#3b82f6</code> , etc.) violating the project's design-token convention.                                                        | Replace inline <code>style=""</code> hex values with CSS variable references in detail template.          |
| B04 | CDV    | Low      | <b>Flash "no permission" message appears 3× after viewer redirect.</b><br>When a viewer tries to access <code>/cash-disbursements/create</code> , the resulting dashboard page shows the permission flash message duplicated three times.                                                                          | Investigate whether <code>flash()</code> is called multiple times in the permission decorator chain.      |

### 4.2 Non-Bug Observations

- **Account picker not filtered:** The CDV expense-line account picker shows *all* account types (assets, liabilities, revenue, expenses), not just expense accounts. This may be intentional (e.g., direct debit to a liability account). Confirm with business owner before treating as a bug.
- **APV Notes silent failure:** If Notes/Particulars is left blank on the APV create form, the vendor Choices.js picker resets and the form silently fails without a visible error message. Not a security issue, but confusing UX — the field should be visually marked required.

- **Print access setting:** `apv_print_access` and `sv_print_access` settings are deferred (not in current Settings UI). The CDV equivalent `cd_print_access` works correctly.
- **Cancel on CDV shows "CANCELLED" on print:** Direct access to `/cash-disbursements/<id>/print` for a cancelled CDV shows the print view with a CANCELLED watermark — this is intentional and correct.

## 5 — Master Quick-Reference Checklist

Use this single-page summary during a rapid test pass

### APV — Accounts Payable Voucher

- ☐ List → status filter works; branch scope correct
- ☐ Create: vendor picker, VAT auto-calc, Notes required
- ☐ VAT-incl amount → correct VAT extraction on line entry
- ☐ Vendor Invoice Date required when VAT or WHT present
- ☐ Post (accountant) → JE posted; AP balance visible in Aging
- ☐ Void (draft) → JE deleted; void reason ≥10 chars enforced
- ☐ Cancel (posted) → reversal JE; AP balance restored
- ☐ Staff: can create/edit/void; cannot post/cancel
- ☐ Viewer: read-only; create/edit/void/cancel all blocked
- ☐ Export Excel & CSV download correctly
- ☐ Audit log: all CRUD actions recorded with actor username
- ☐ XSS in text fields → stored escaped; not executed
- ☐ CSRF token in all forms; POST without token → 400

### CDV — Cash Disbursement Voucher

- ☐ List → status filter; only current branch shown
- ☐ Create (expense): expense line table; account picker; VAT/WHT optional
- ☐ Create (AP): open-bills AJAX loads; amount applied ≤ bill balance
- ☐ Post (accountant) → JE posted; linked AP bill balance updated
- ☐ Void (draft, reason ≥10) → JE deleted; status = Voided
- ☐ Cannot void a Posted CDV
- ☐ Cancel (posted, reason ≥10) → reversal JE; AP bills restored; status = Cancelled
- ☐ Cannot cancel a Draft CDV
- ☐ Staff: can create/edit/void; cannot post/cancel
- ☐ Viewer: blocked from create/edit/void/cancel
- ☐ Export Excel & CSV with date-filtered filename
- ☐ Print: shown only per `cd_print_access` setting
- ☐ Audit log: create/update/post/void/cancel recorded
- ☐ Negative amounts in expense lines currently NOT validated (Bug B01)
- ☐ Non-numeric amounts rejected (form returns to create page)
- ☐ XSS in Notes and Void reason → stored escaped

- ☐ CSRF token in all action forms
- ☐ No JS confirm() dialogs — all confirmations use custom HTML modals
